Exercise 4: this Ja's: von semana precedente.

1)
$$\forall (n) \in \mathbb{N}'$$
,

 $sh(n) \circ (h(y)) = (e^{x} - e^{-x})(e^{y} - e^{-y})$
 $e^{ny} - e^{-x} + e^{-y}$
 $e^{ny} - e^{-xy} - e^{-xy}$
 $e^{ny} - e^{-xy} - e^{-xy}$

Exacie 5: 1) Posons Vx E(R, P(x) = 84(n) - x Pst cleurable mu in at ∀n∈1/4, (p(n) = ch(n)-1 Or ch(0) = 1 of ch charesante on 1P2, alos YxEIL, P(a), o. ca 4(0) =0 One VXEIl, Y/a)), 0 d'où, Vn Ell+ shla) 2 a 2) Posons, $\forall x \in \mathbb{R}_+, \ \Psi(x) = ch(x) - 1 - \frac{x^2}{3}$ y at dérivable. su 1/1 x. et ∀x ∈ (1/1 / V(n) = sh(n) - n Done trElls, y(n)= P(n) >0 + 00 ca 4(0)=0 Ψ(n) ano trell+, 4(n)/0 \(\gamma\) d'an , tre ent, ch(2)), 1+ 21

Exercise 6 soit l'equation d'inconne a clu(n) = 2. On reach (e 2 + e 2 = 2 (=) e 2 + e 2 = 4. (e) e 27 - 4e 2 +1=0 Posono X = e 1 l'equation de recept: X2 - 4X + 1 = 0 1 = 16 - 4 = 12) 0 do solution X12 = 4 ± \(\frac{12}{2}\) d'on X12 = 2 ± √3? done $\begin{cases} e^{2n} = 2 + \sqrt{3} & \text{do solution} \\ e^{2n} = 2 - \sqrt{3} \end{cases}$
